

Multi Agent Tech. Task 1

Denis Uzhva

October 2019

Figure 1: Topology of the graph

Root node: 0. Cost of a memory cell: 10\$, cost of a message: 0.01\$, cost of a Data Center call: 1000\$.

N	M	K	T	Mem.	Comp.	Sum.	Mul/Div	Local Cost	DC Cost	Total Cost
10	36	3	56	$2 \cdot 10 + 3$	2	$2 \cdot (10 - 1)$	1	230.56	1000	1230.56

Table 1: N – num. of nodes, M – num. of connections, K – depth, T – time (num. of messages sent), Mem. – memory (1 array with nodes, 1 array with roots, 3 variables with agent IDs: self, root and previous), Comp. – num. of comparisons, Sum. – num. of sums, Mul/Div – num. of multiplications and divisions, Local cost – cost of everything within the graph, DC Cost – cost of all the calls to our Data Center, Total Cost = Local Cost + DC Cost
